By Johns Hopkins University Geology

General Books. Paperback. Book Condition: New. This item is printed on demand. Paperback. 238 pages. Dimensions: 9.7in. x 7.4in. x 0.5in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1922. Excerpt: . . . has referred 3 a leaf from the lower Miocene of Chile to Allamanda, and this may be compared with Spondias mirifica. Occurrence. --Aramary. Collection. --Rensslear Polytechnic Institute. Genus Anacardites Saporta Anacardites braziliensis n. sp. Plate V, Fig. 8 Leaflets small, falcate-lanceolate in general outline, with a pointed tip and a pointed, inequilateral base. Midvein stout, curved, prominent. Margins with two or three shallow emarginate indentations on each side, forming shallow curved segments or lobes of unequal length. Length about 3. 75 centimeters. Maximum width, at or below the middle, about 1 centimeter. Secondaries thin, numerous, diverging from the midvein at wide angles, camptodrome. Tertiary venation obsolete. This fossil leaflet has been compared with all of the members of the Anacardiaceae. Among those which we have seen it is most like the leaflets of several unnamed South American species of Spondias in the U. S. National...
