

An Elementary Treatise on the Differential and Integral Calculus; With Numerous Examples (Paperback)

Filesize: 6 MB

Reviews

This publication is definitely not simple to begin on studying but quite fun to see. It really is full of knowledge and wisdom I am just effortlessly can get a satisfaction of studying a created pdf.
(Alfreda Bradtke)

AN ELEMENTARY TREATISE ON THE DIFFERENTIAL AND INTEGRAL CALCULUS; WITH NUMEROUS EXAMPLES (PAPERBACK)

Rarebooksclub.com, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1883 edition. Excerpt: . Find in the line joining the centres of two spheres, the point from which the greatest portion of spherical surface is visible. The function to be a maximum is the sum of the two zones whose altitudes are AD and ad; hence we must find an expression for the areas of these zones. Put CM = E and cm = r, Cc = a and CP = x. The area of the zone on the sphere which has R for its radius (from Geometry, or Art. 194) = $2\pi r^2 \arcsin(\frac{x}{r})$ = $2\pi r^2 \arcsin(\frac{a}{r})$ = $2\pi r^2 \arcsin(\frac{r}{R})$. The area of the zone on the smaller sphere which has r for its radius (from Geometry, or Art. 194) = $2\pi r^2 \arcsin(\frac{x}{r})$ = $2\pi r^2 \arcsin(\frac{ad}{r})$. The function to be a maximum is the sum of these two areas, which is $2\pi r^2 \arcsin(\frac{a}{r}) + 2\pi r^2 \arcsin(\frac{ad}{r})$. This function is to be maximized with respect to x. Put $u = \arcsin(\frac{x}{r})$, then $x = r \sin u$, $dx = r \cos u du$. The function becomes $2\pi r^2 u + 2\pi r^2 \arcsin(\frac{ad}{r})$. Differentiate with respect to u, and set the result equal to zero. This gives $2\pi r^2 + 2\pi r^2 \frac{ad}{r^2} \frac{1}{\sqrt{1 - \frac{a^2}{r^2}}} = 0$. Simplifying, we get $2\pi r^2 + 2\pi ad \frac{1}{\sqrt{1 - \frac{a^2}{r^2}}} = 0$. This is a quadratic equation in $\frac{1}{\sqrt{1 - \frac{a^2}{r^2}}}$. Solving it, we get $\frac{1}{\sqrt{1 - \frac{a^2}{r^2}}} = -\frac{2\pi r^2}{2\pi ad} = -\frac{r^2}{ad}$. Squaring both sides, we get $1 - \frac{a^2}{r^2} = \frac{r^4}{a^2 d^2}$. Rearranging, we get $a^2 = r^2(1 - \frac{r^4}{a^2 d^2})$. This is a quadratic equation in r^2 . Solving it, we get $r^2 = \frac{a^2 d^2}{a^2 + d^2}$. Substituting this value of r^2 into the expression for the function, we get $2\pi r^2 u + 2\pi r^2 \arcsin(\frac{ad}{r}) = 2\pi \frac{a^2 d^2}{a^2 + d^2} u + 2\pi \frac{a^2 d^2}{a^2 + d^2} \arcsin(\frac{ad}{\sqrt{a^2 + d^2}})$. This is a constant function, so it is a maximum. CHAPTER IX. TANGENTS, NORMALS AND ASYMPTOTES. 100. Equations of the Tangent and Normal--Let P, (x , y.) be the point of tangency; the equation of the tangent line at (x1, y) will be of the form (Anal. Geom., Art. 25) $y-y = a x-x$, (1) in which a is the tangent of the angle which the tangent line makes with the axis of x. It was shown in Article 56a that the value of this tangent is equal to the derivative of the ordinate of the point of tangency, with respect to x, is the equation of the tangent to the curve at the...
