Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1815 Excerpt: .to larger bodies, though with much smaller velocities: it is described, and a figure of it given, near the end of the 1st vol. of his works, and in the 3d vol. of my Tracts. That this resisting power of the air to swift motions is very sensibly increased beyond what Newton s theory for slow motions makes it, seems hence to be evident By other experiments it appears that the resistance is very sensibly increased, even in the velocity of 400 feet. However, this increased power of resistance diminishes as the velocity of the resisted body diminishes, till at length, when the motion is sufficiently abated, the actual resistance coincides with that supposed in the theory nearly. For these varying resistances Mr. Robins has given a rule, though not correct, extending to 1670 feet velocity. Mr. Euler has shown, that the common doctrine of resistance answers pretty well when the motion is not very swift, but in swift motions it gives the resistance less than it ought to be, on two accounts. 1. Because in quick motions, the air does not fill up the space behind the body fast enough to press on the hinder parts, to counterbalance the weight of the atmosphere on the fore part. 2. The density of the air before the ball being increased by the quick motion, will press more strongly on the fore part, and so will resist more than lighter air in its natural state. And he has...
